

SmokeESC RCP-3000

remote control panel

Device description

The RCP-3000 is a remote control panel for use in the SmokeESC system. The RCP-3000 allows you to monitor, activate and block the state of one CAB-3000 board. Thanks to the built-in ignition switch, it provides protection against unauthorized access. A clear and easy-to-use interface enables quick reaction when the situation requires it.

Features

Easy-to-use

A clear and easy-to-use interface enables quick response in case of fire and convenient tests during commissioning and inspection. Large indicator lights inform about the status of the connected board.

Protection against unauthorized access

Thanks to the built-in ignition switch, it protects against unauthorized access and at the same time allows for quick start-up.

Convenient connection

Plenty of space in the housing. Multiple cable glands allow for quick and convenient installation.

Technical parameters

| PARAMETER | VALUE |
|-----------------------------|-------------------------------|
| Supply voltage | 24 V DC |
| Power consumption | typ. 15 mA, $I_{MAX} < 65$ mA |
| Operating temperature | od -25 °C do +50 °C |
| Enclosure protection rating | IP54 |
| Dimensions | 205x132x70 mm |
| Weight | 500 g |
